INTRODUCTION

Welcome to Synaxis MMP

What the platform does, who it's for, and how this guide is organized.

Synaxis MMP (Ministry Management Platform) is the system your church uses to keep track of members and households, run fellowships and departments, record attendance at services and events, manage giving and church finances, track fixed assets, and communicate with staff and leaders — all in one place, built for a single congregation or a multi-branch church.

The system is **multi-tenant**: many churches can each have their own private, fully separated space (their own members, giving, and records), all running on the same platform. A small, separate **Platform Administrator** role exists purely to create those church spaces — it has no visibility into any church's actual congregation, giving, or pastoral data.

Everyone else works inside their own church's space, with access shaped by their role. This guide is organized the same way: a chapter per role, followed by the workflows that many roles share (Reports, Import Center, and so on).

The roles at a glance

Platform Administrator

Creates church organizations and their first Org Admin. No access to any church's members, giving, or pastoral data.

Org Admin

Full access within their own church — every module, staff management, and settings.

Finance Officer

Giving, funds, pledges, vendors, partners, requisitions, and financial reports.

Department Head

Their department's activity and fund requisitions.

Fellowship Leader

Their cell group / fellowship's meeting reports — attendance, giving, expenses.

Volunteer / Member

Narrow, task-specific access — dashboard, events, and whatever they've been assigned.

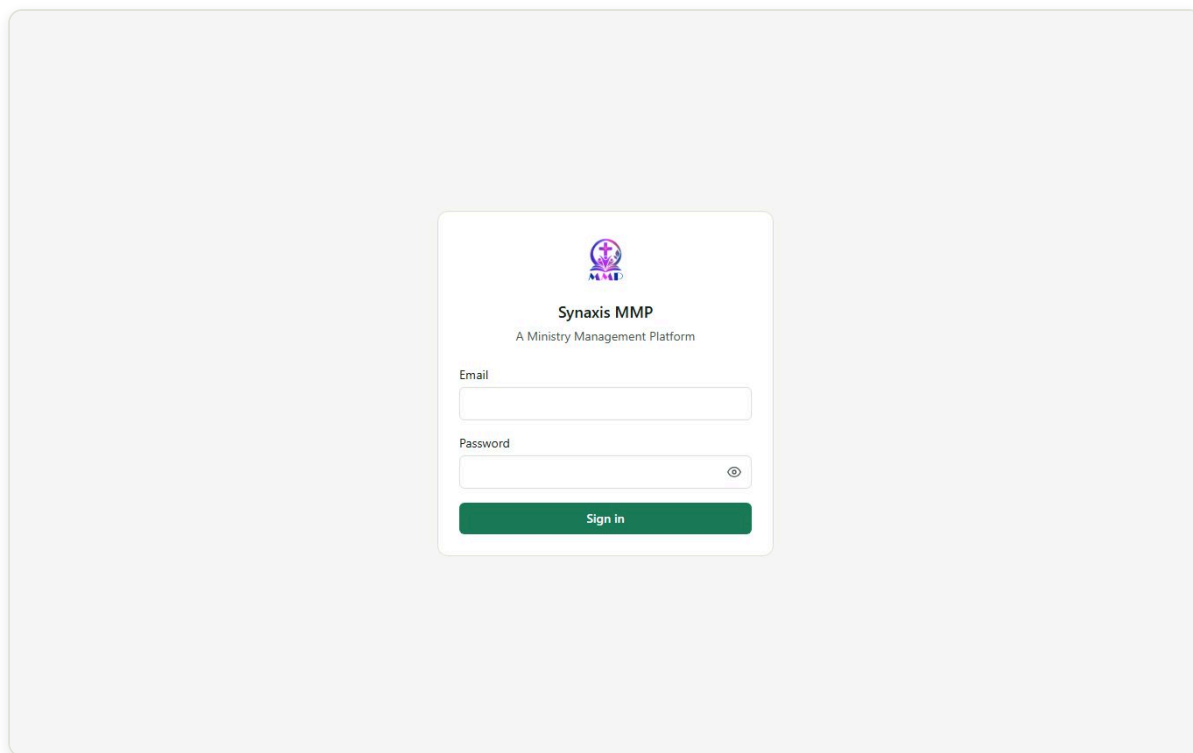

ABOUT THE SCREENSHOTS IN THIS GUIDE

Every screenshot in this guide uses invented demonstration data for a fictional church, **Grace Chapel**, with invented staff and member names. No real congregation data appears anywhere in this document.

Getting Started & Signing In

Every role starts at the same login screen.

Whatever your role, you sign in at the same page with the email address and password your Org Admin (or, for a brand-new church, the Platform Administrator) set up for you. There is no separate login page per role — the system takes you to the right dashboard automatically once you're signed in.

The sign-in screen. The same form is used by every role — Platform Administrator, Org Admin, Finance Officer, and everyone else.

If you forget your password

There is no automatic "forgot password" email yet, since the system doesn't send email on its own. Ask your Org Admin (or, if you *are* the Org Admin, ask the Platform Administrator) to generate a reset link for your account and send it to you directly — by phone, WhatsApp, or in person.

A note on public self-registration

Separately from staff login, every church gets its own public link that visitors can fill in themselves to express interest in joining — no account required. This is covered in [Registrations & Import Center](#), in the Org Admin chapter.

Platform Administrator Guide

The one screen a Platform Administrator gets — and why that's deliberate.

The Platform Administrator's entire job is provisioning: creating a new church as a tenant on the platform, and appointing that church's first Org Admin. Once that's done, the Platform Administrator has **no further access** to that church's members, giving, or pastoral records — by design, not by omission. This keeps every congregation's data private, even from the people running the underlying platform.

The Platform Administration screen — the full list of churches on the platform, with the ability to suspend one if needed.

Creating a new church

- 1 Click **+ Add organization**.
- 2 Enter the church's name — a URL-safe *slug* is suggested automatically, editable if needed.
- 3 Pick a default color theme for the church (its Org Admin can change this later in Settings).
- 4 Enter the name, email, and a temporary password for that church's **first Org Admin**.
- 5 Click **Create organization**. The church now exists, fully separated from every other church on the platform, and its Org Admin can sign in immediately with the credentials you set.

The screenshot shows the Synaxis MMP Platform Administration interface. The left sidebar has a 'Platform Admin' button. The main content area is titled 'Platform Administration' and includes a '+ Add organization' button. Below this, there's a list of organizations with one entry: 'Grace Chapel' with a slug 'grace-chapel-demo'. A modal form titled 'New organization' is open, allowing the creation of a new church. The form fields include: 'Church / organization name' (filled with 'Hope Family Church'), 'Slug (subdomain-safe)' (filled with 'hope-family-church'), 'Default theme' (a dropdown menu with 'Growth' selected), 'First Organization Admin' section with 'Full name' (filled with 'Michael Ochieng') and 'Email' (filled with 'admin@hopefamilychurch.demo'), and a 'Temporary password' field (filled with masked characters). At the bottom of the form are 'Create organization' and 'Cancel' buttons.

The new-organization form — church name, slug, theme, and the first Org Admin's details, all in one step.

Suspending a church

If a church needs to be temporarily locked out (for example, a billing issue), use the **Suspend** action on its row. Everyone at that church sees a clear message at login ("Your organisation is suspended, contact your administrator") until it's reactivated — nothing is deleted.

Resetting an Org Admin's password

Since the system doesn't send email on its own, generate a reset link from the church's row and relay it to them directly (phone, WhatsApp, or in person). The link itself is a real, working page — it just isn't emailed automatically.

WHY SO LITTLE ACCESS?

This isn't a placeholder — it's the whole point of the role. A Platform Administrator can create and suspend churches, but every attempt to reach a church's members, giving, or pastoral data is blocked at the database level, not just hidden in the interface.

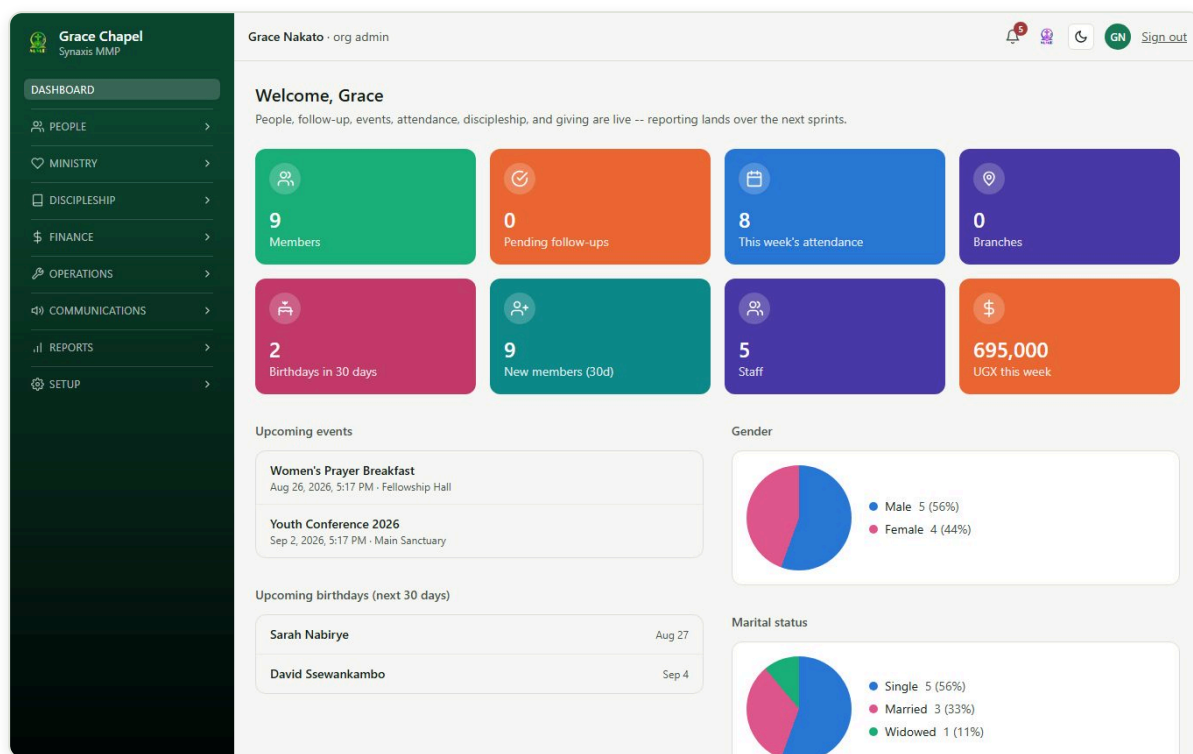

Organization Admin Guide

The broadest role in your church — every module, plus staff and settings.

The Org Admin sees everything inside their own church: people, ministry, discipleship, finance, operations, communications, and reports, plus the Setup area for managing staff accounts and church settings. This chapter walks through the areas an Org Admin uses most often. Finance-specific workflows (giving, funds, requisitions) are covered in their own depth in [Chapter 04](#), since a Finance Officer uses exactly the same screens.

Dashboard

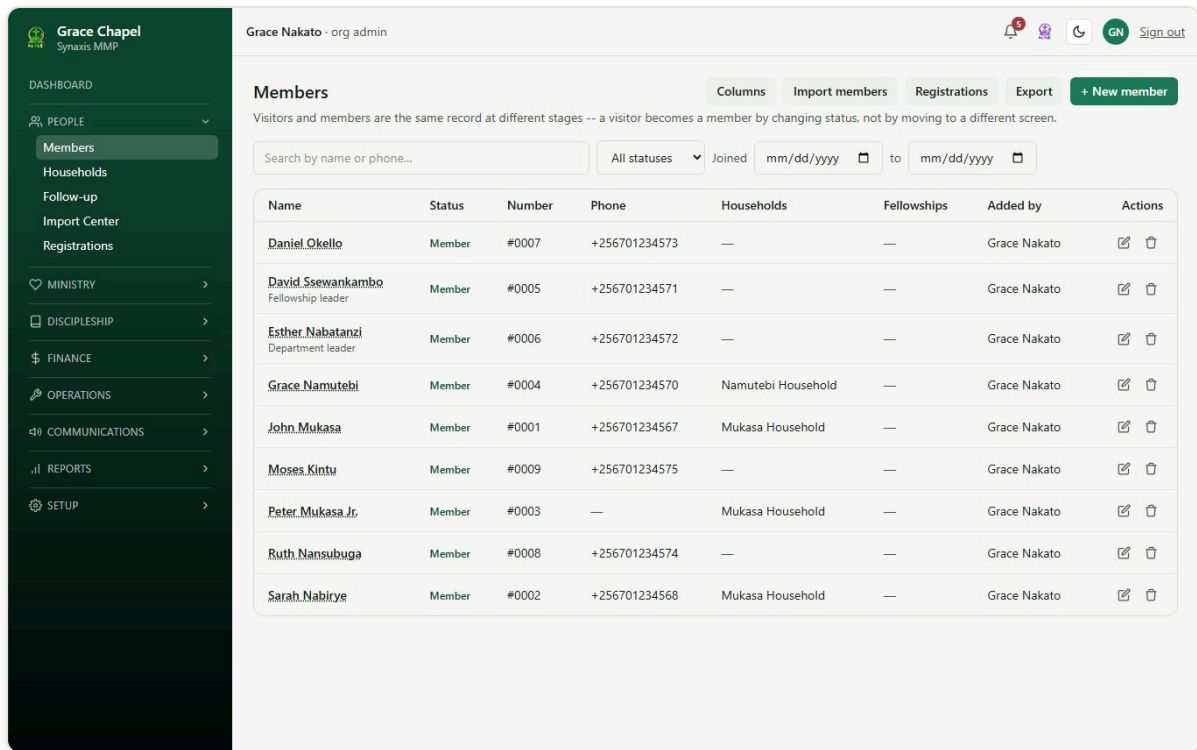

The dashboard is the first thing an Org Admin sees after signing in: headline numbers (members, pending follow-ups, this week's attendance, upcoming birthdays, new members, staff count, and this week's giving), upcoming events, upcoming birthdays, and a gender / marital-status breakdown of the congregation. Every tile that leads somewhere useful is clickable.

The Org Admin dashboard. "This week's giving" only appears here and for Finance Officers — other roles don't see a number they can't act on.

Members & Households

The Members list is where the congregation lives. A visitor and a full member are the *same* record at different stages — someone becomes a member by changing their status, not by moving to a different screen. Every row shows status, member number, phone, household, and fellowship at a glance, and can be filtered by status or joined-date range.

The Members list — search, filter by status or joined date, and jump straight into Import, Export, or Registrations from the toolbar.

Members

Visitors and members are the same record at different stages -- a visitor becomes a member by changing status, not by moving to a different screen.

Log a follow-up

Follow-up history

A member's own page — details, plus a running follow-up log underneath.

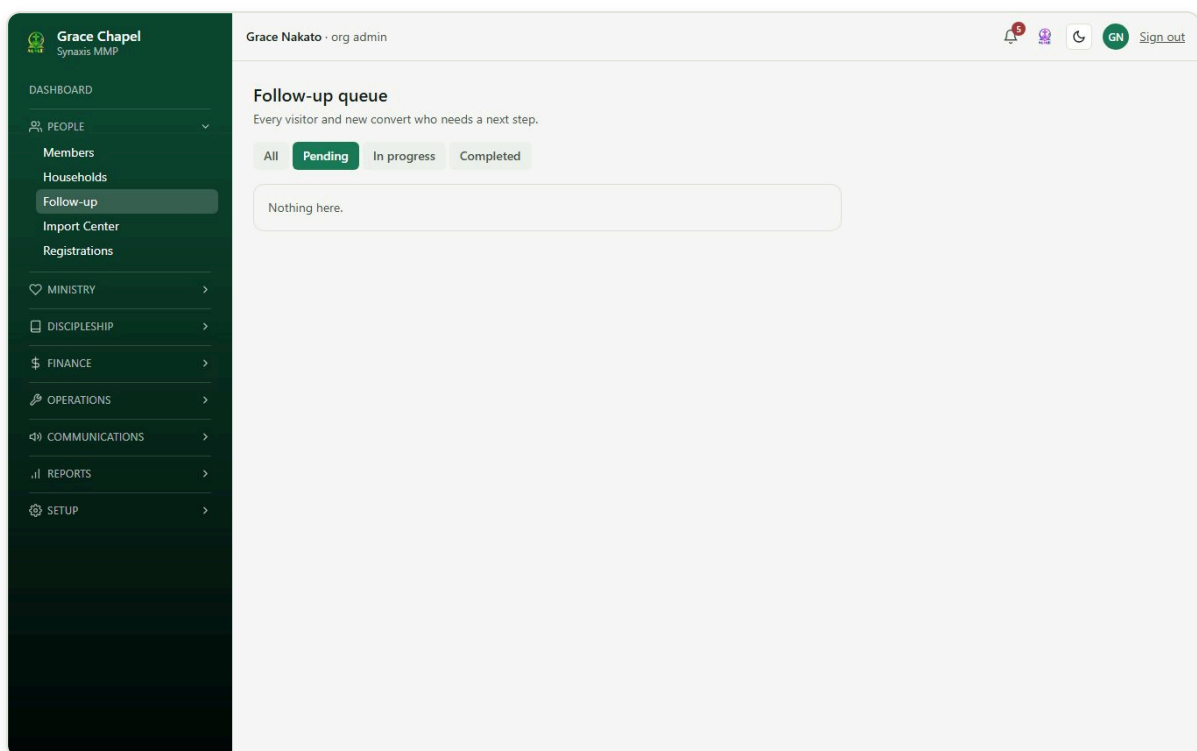

Households group related members under one roof — a head, a spouse, children, or other dependents — and an address that new members can inherit automatically from the household's head.

Households — each one shows its head and how many members belong to it.

Follow-up

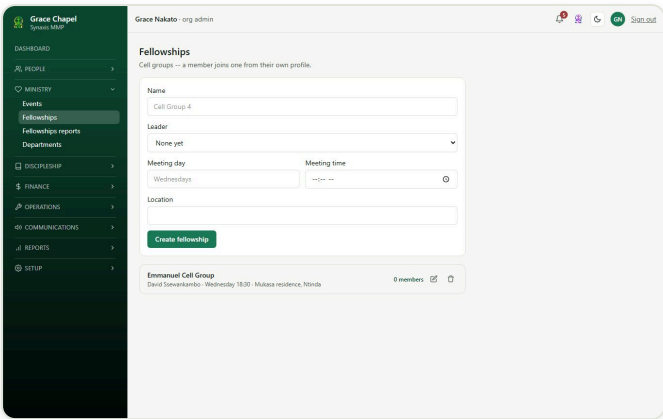

Every member has a follow-up log on their own page (visible in the member detail screenshot above) — a simple running note of calls made, invitations extended, and visits paid. The Follow-up list rolls all of this up across the whole congregation, so nobody who needs a call falls through the cracks.

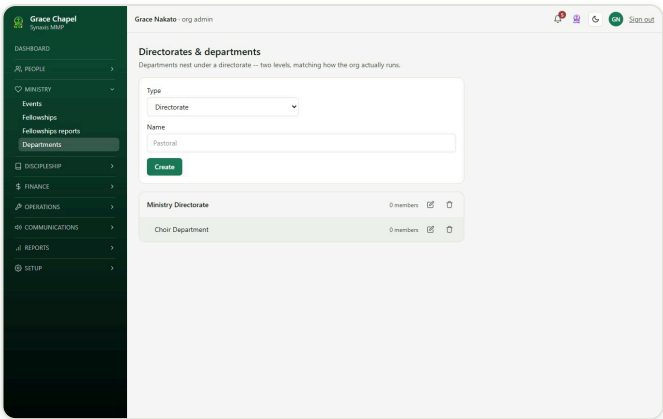

The Follow-up list — every pending, in-progress, and completed follow-up in one place.

Fellowships & Departments

Fellowships (sometimes called cell groups) and Departments are the two ways a church organizes its people into smaller units. Each Fellowship has a leader (drawn from members tagged as a "Fellowship leader"), a meeting day and time, and a location. Departments sit under a Directorate and have a head.

Fellowships — leader, meeting time, and location for each cell group.

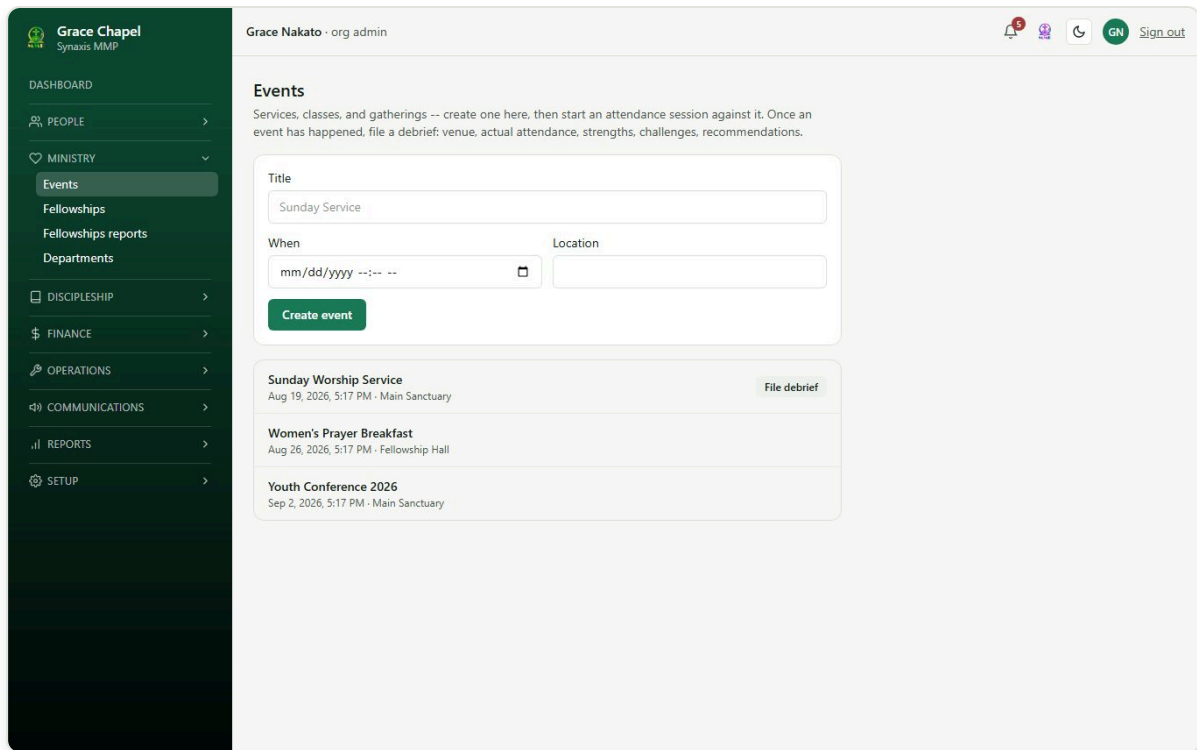

Departments — organized under directorates, each with its own head.

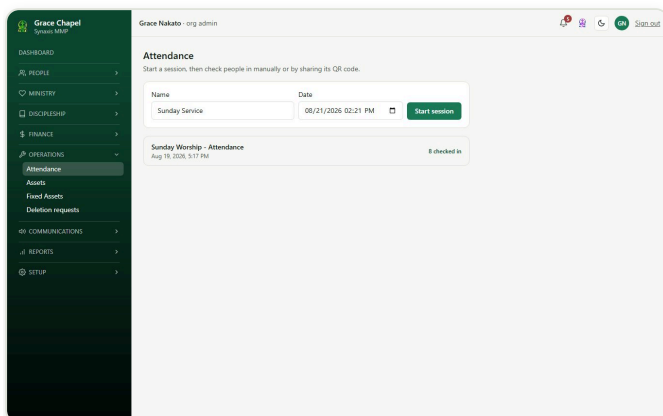

Fellowship leaders file their own meeting reports — attendance, giving collected, and expenses — which route through a finance review before anything hits the ledger. That whole workflow, from the leader's side and the reviewer's side, is covered in [Chapter 05](#).

Events & Attendance

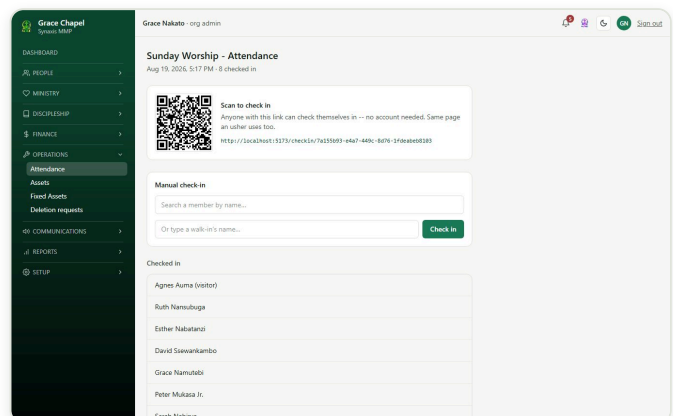

Events are anything on the calendar — a Sunday service, a conference, a prayer breakfast. Attendance is tracked separately through **sessions**, which can optionally be tied to an event. A session supports manual check-in by name, or a scannable QR code that lets people (or an usher) check themselves in from their own phone, no account required.

Events — past and upcoming, each with an optional post-event debrief once it's happened.

Attendance sessions — one per gathering, with a headcount at a glance.

Inside a session — the QR check-in code, a manual search-and-check-in box, and the running list of who's checked in.

Fixed Assets

The Fixed Asset Register (under Operations) tracks land, buildings, equipment, and vehicles — what the church owns, its acquisition cost, and its **current value**, computed live from a straight-line depreciation rate rather than stored and left to go stale. Editing an asset once it's on the register doesn't apply immediately — it goes through the same approve-before-it-happens pattern used elsewhere in the system, so a second person always confirms a change before it takes effect.

Fixed Assets

+ Add asset

Land, buildings, equipment -- what your church owns, at every branch, with its value and current condition. Editing an asset once it's on the register files a request an appointed approver has to confirm first.

Name	Branch	Acquired	Cost	Current value	Condition	Actions
Church Land - Ntinda Plot Land	Org-wide	Jun 4, 2018	UGX 120,000,000	UGX 120,000,000	Excellent	Ask for state
Church Van - Toyota Hiace Vehicle	Org-wide	Mar 4, 2024	UGX 45,000,000	UGX 22,823,337	Good	Ask for state
Sanctuary Sound System Equipment	Org-wide	Apr 8, 2025	UGX 18,000,000	UGX 14,303,880	Good	Ask for state

Pending edit requests (0)

Nothing waiting.

Pending condition checks (0)

Nothing waiting.

History

Nothing reviewed yet.

The Fixed Asset Register — current value is recalculated every time the page loads, never stored.

Announcements & Testimonies

Announcements let an Org Admin broadcast a message in-app to everyone with a login, or narrow it to one role (say, every Fellowship Leader) or one branch. This reaches staff and leaders with an account — it can't yet reach the wider congregation directly, since no SMS/WhatsApp/email provider is connected.

Choir practice this week has moved to Saturday at 4:00pm in the main sanctuary.
Everyone with a login · 0 recipients · by Grace Nakato · Aug 21, 2026

Announcements — compose a broadcast, target it by role or branch, and see a log of everything already sent.

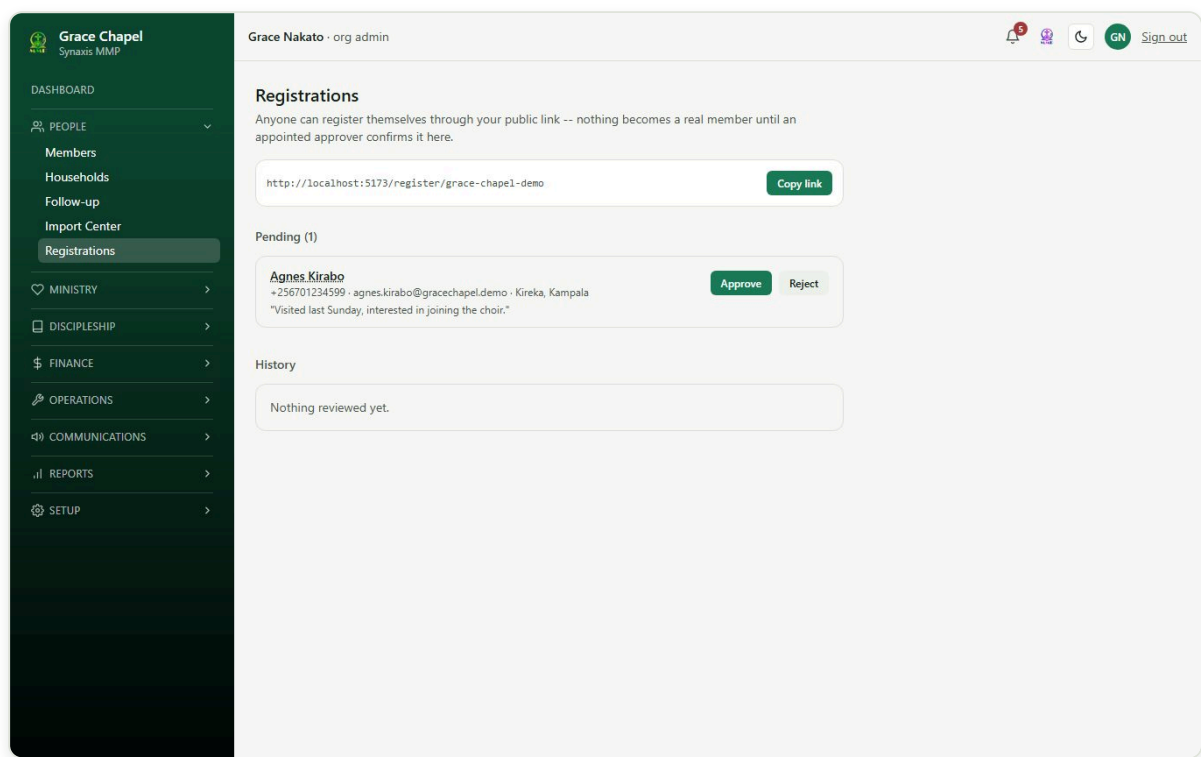

Testimonies is a simple shared feed: anyone with a login can post a categorized testimony (healing, answered prayer, a new job, and so on), and everyone reads the feed. Only an Org Admin can remove one.

The Testimonies feed — shared across the whole church, filterable by category.

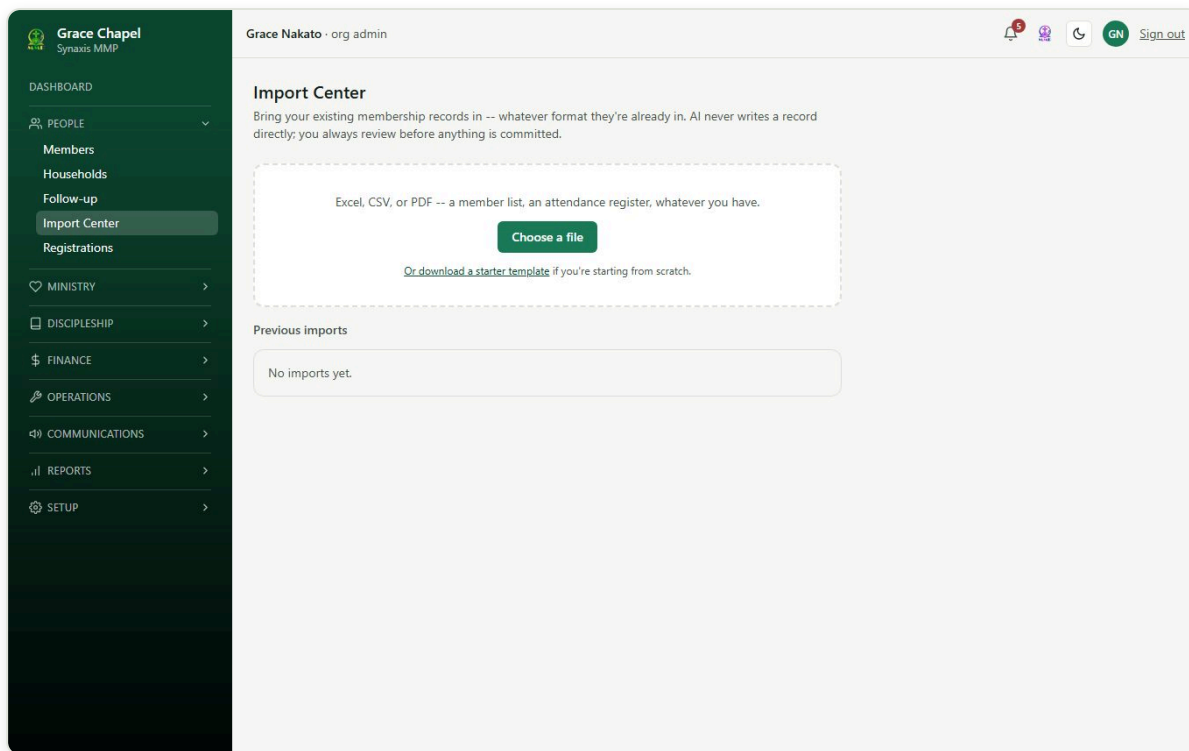

Registrations & Import Center

Every church gets its own public registration link (shown on the Registrations page, ready to copy and share). A visitor who fills it in doesn't become a real member automatically — it sits pending until an appointed approver reviews and approves it, at which point it becomes a normal member record.

Registrations — the church's public link, and a pending self-registration waiting for someone to approve or reject it.

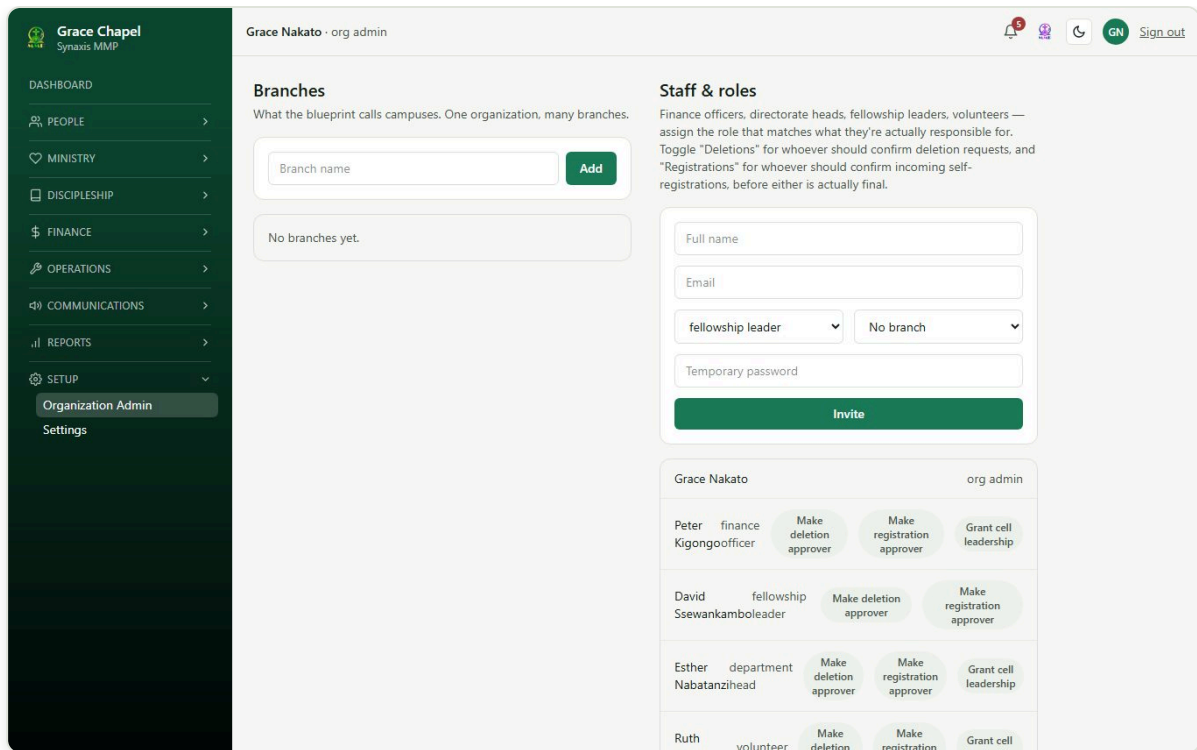

The Import Center is how an existing member list gets into the system in bulk — Excel, CSV, or even a scanned PDF register. A deterministic column-matcher handles clean spreadsheets; AI extraction only kicks in for messy or unrecognized layouts. Either way, nothing is ever written directly — you always review the matched rows before anything is committed.

The Import Center — drop in a file, or start from a blank template if you're building your list from scratch.

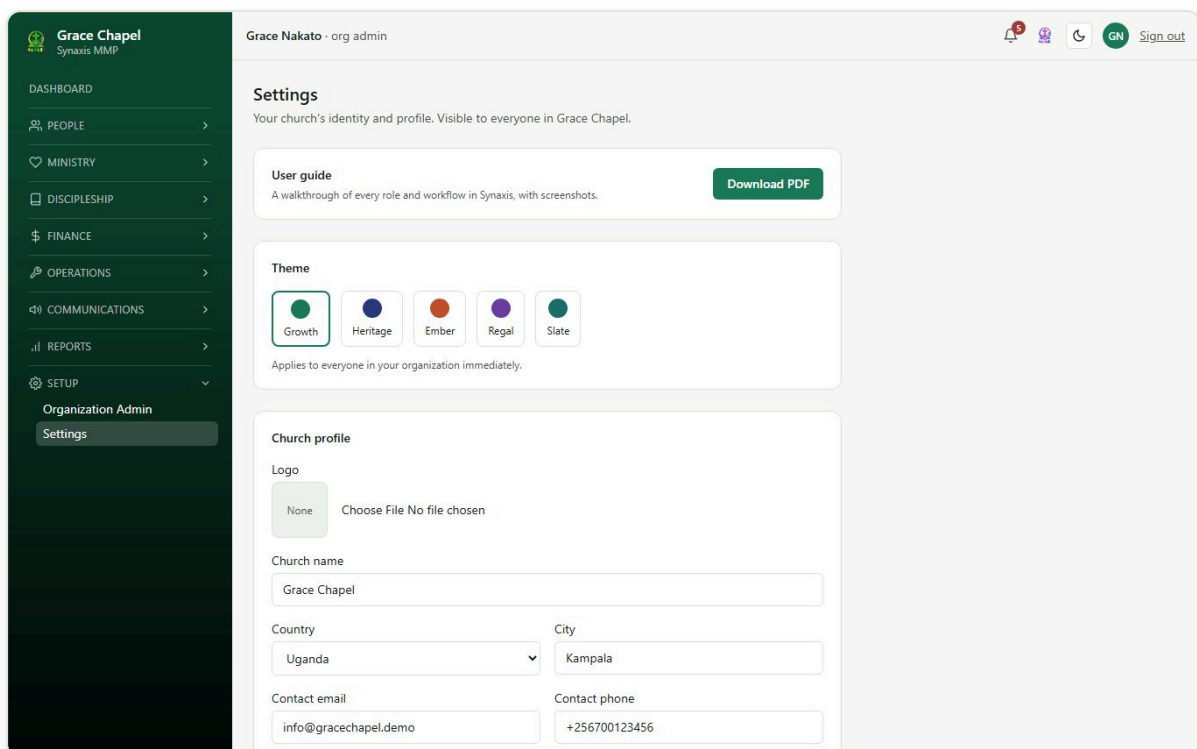

Staff & Roles, Settings

Under **Setup** → **Organization Admin**, an Org Admin invites staff accounts and assigns each one a role — Finance Officer, Department Head, Fellowship Leader, Volunteer, or another Org Admin. Two additive toggles, *Make deletion approver* and *Make registration approver*, appoint specific people to confirm deletions or self-registrations, independent of their base role. *Grant cell leadership* lets someone lead a fellowship without changing their role at all — useful for a Department Head who also happens to run a cell group.

Staff & roles — invite an account, assign its role, and appoint approvers, all from one screen.

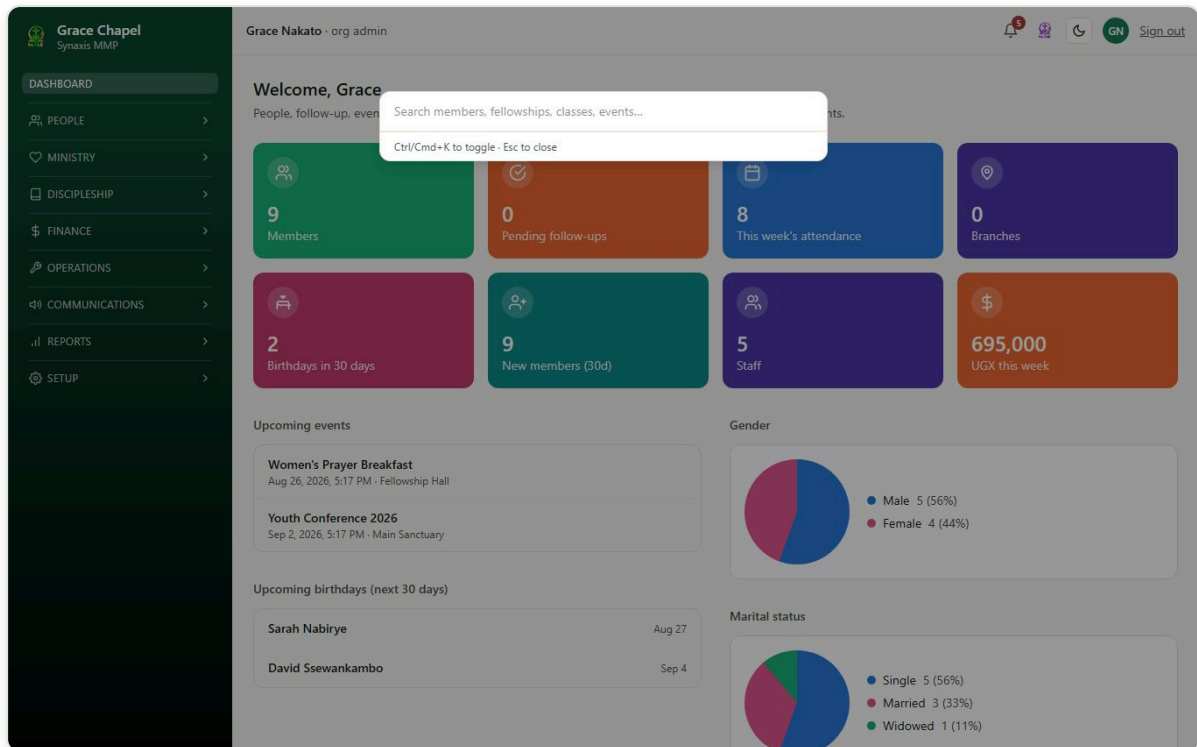

Under **Setup** → **Settings**, an Org Admin manages the church's own identity: name, logo, color theme, country, currency, and contact details. This is also where the four core terms — Member, Household, Fellowship, Department — can be renamed to match how the church actually talks (for example, "Cell Group" instead of "Fellowship"); the change updates the sidebar and every page title that uses that word.

Settings — church profile, color theme, and (further down the page) terminology and currency.

TIP: THE COMMAND PALETTE

Press **Ctrl** / **Cmd** + **K** from anywhere to jump straight to any member, fellowship, discipleship class, or event by typing part of its name — much faster than clicking through the sidebar.

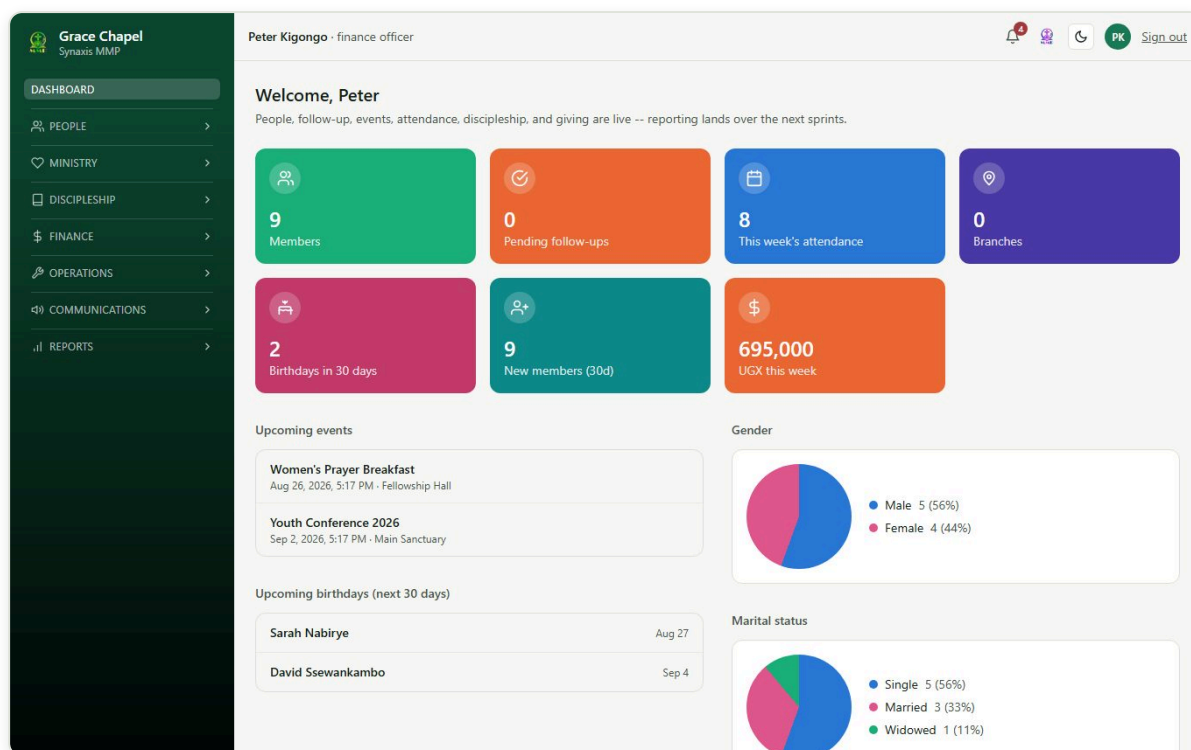

The command palette — a fast way to jump straight to a record instead of navigating the sidebar.

Finance Officer Guide

Giving, funds, pledges, vendors, requisitions, and financial reports.

A Finance Officer sees the same sidebar as an Org Admin, minus the Setup area, and is the only other role (besides Org Admin) who sees the dashboard's "This week's giving" tile — a number they can actually act on.

The Finance Officer's dashboard — same layout as an Org Admin's, giving tile included, Setup area excluded.

Giving Records & Categories

Every gift is recorded against a **category** (Tithe, Offering, Missions — categories can be nested into subcategories), can optionally be earmarked to a **fund**, and records how it was given: cash, bank transfer, mobile money, or cheque. A gift can come from a member, an external partner, or simply a name typed in for a one-off giver.

Giving records — every gift on file, with its category, fund, method, and giver.

Funds & Pledges

A Fund is a designated pool of money — a Building Fund, a Missions Fund — kept separate from Category (what *kind* of gift it is) but not mutually exclusive with it: a gift can be both "Tithe" and earmarked to the Building Fund. A Fund with a target amount shows a live progress bar computed from actual recorded giving, and can carry an optional deadline.

A Pledge is a member's (or partner's) commitment to give a total amount over time. The fulfilled amount is always *calculated* from their actual recorded giving — never entered by hand — and a pledge's status (Active, Fulfilled, Archived) updates automatically as it's paid down or its end date passes.

Funds — a live progress bar against each target, computed from real giving.

Pledges — fulfilled amount is always derived, never typed in.

Giving Batches & Accounting

A Giving Batch groups one collection — typically a single Sunday service — so the *declared* total (what was counted) can be reconciled against what was actually recorded into the system, with any variance shown live.

Accounting is a simple chronological register of everything recorded in Giving, filterable by date, with a running total — deliberately **not** full double-entry bookkeeping. Export from here into dedicated accounting software if that level of detail is needed.

Giving batches — declared total vs. recorded total, reconciled per collection.

Accounting — a running, filterable register of every gift, not a full ledger.

Financial Settings & Partners

Financial Settings is where giving categories are organized into their hierarchy, and where the church's own vendors (payees for requisitions and purchases) are kept. Partners are external givers — a person, organization, or sister church — who give financially without being a Member here; their giving and pledge history is tracked exactly like a member's, just kept separate.

Financial Settings — the category hierarchy, plus a tab for the church's own vendors.

Partners — external givers tracked with their own giving history, separate from the membership list.

Fund Requisitions

A requisition is a genuinely different shape from a plain expense entry: a leader asks for funds for a stated reason, Finance approves or rejects the request, and only afterward does the leader file a separate **accountability report** — what the money actually went toward, with receipt photos — which Finance reviews again. Neither the requester nor a reviewer can approve their own submission at either stage.

Fund requisitions — request, review, approve, then a separate accountability step once the money's spent.

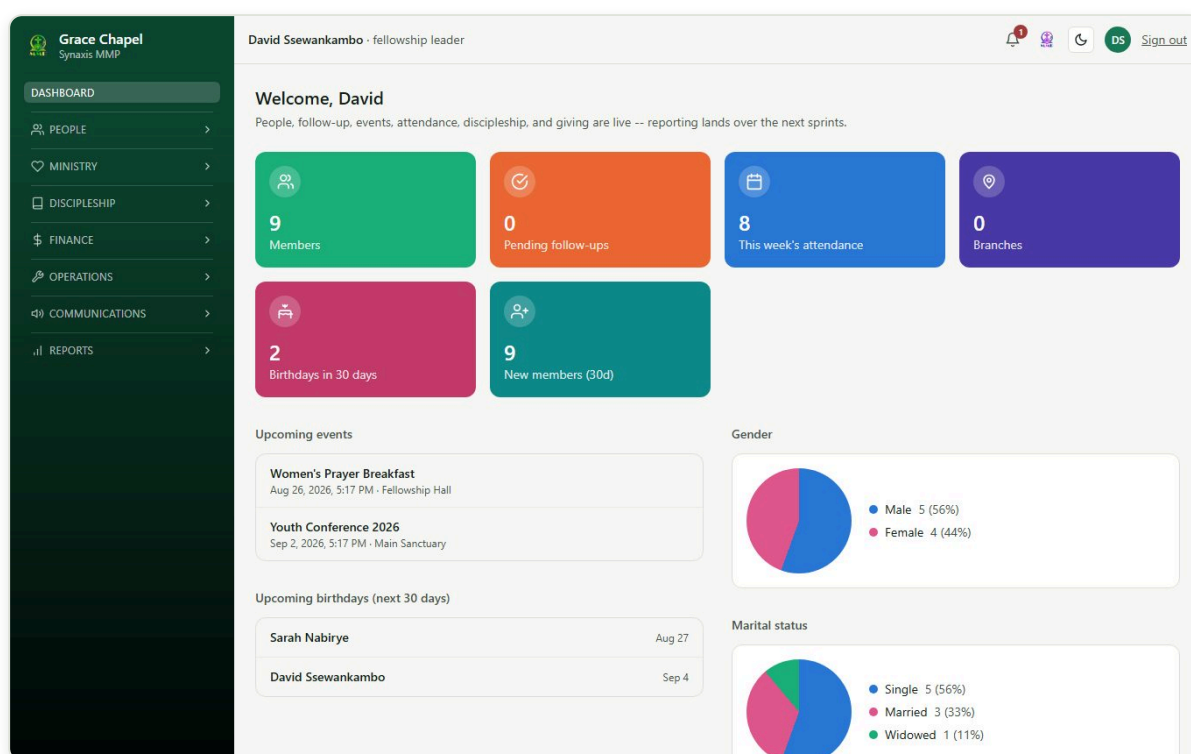

Department Head & Fellowship Leader Guide

Two roles, each scoped to one part of church life — their own department's or fellowship's activity.

Both roles see the full sidebar (the system doesn't hide modules they can't act on — it simply doesn't let their actions apply outside their own department or fellowship), but in practice their day-to-day work centers on one screen each: a Fellowship Leader files meeting reports, and a Department Head requests funds.

Fellowship Leader: submitting a meeting report

After a cell group meeting, the leader logs a headcount (optionally naming exactly which of the fellowship's own members attended), how much was collected, and any expenses — with a note on what the expenses were for. **Nothing hits the giving ledger yet.** The report sits pending until an Org Admin or Finance Officer reviews it, confirms a giving category, and approves it — only then does a real giving record get created. A leader can never approve their own report, even if they also happen to hold an approving role.

A Fellowship Leader's dashboard — the same layout everyone gets, without the giving tile.

Grace Chapel
Synaxis MMP

David Ssewankambo - fellowship leader

Fellowship reports
Report on your fellowship's last meeting -- who came, what was collected, what was spent. Giving you report here doesn't hit the ledger until finance reviews and confirms it.

Fellowship: Emmanuel Cell Group Meeting date: 08/21/2026

Attendance (total headcount, including visitors):

Giving collected (UGX, optional): Suggested category (optional): Let finance decide

Expenses (UGX, optional): What were expenses for?:

Notes:

Submit report

Pending finance review (1)

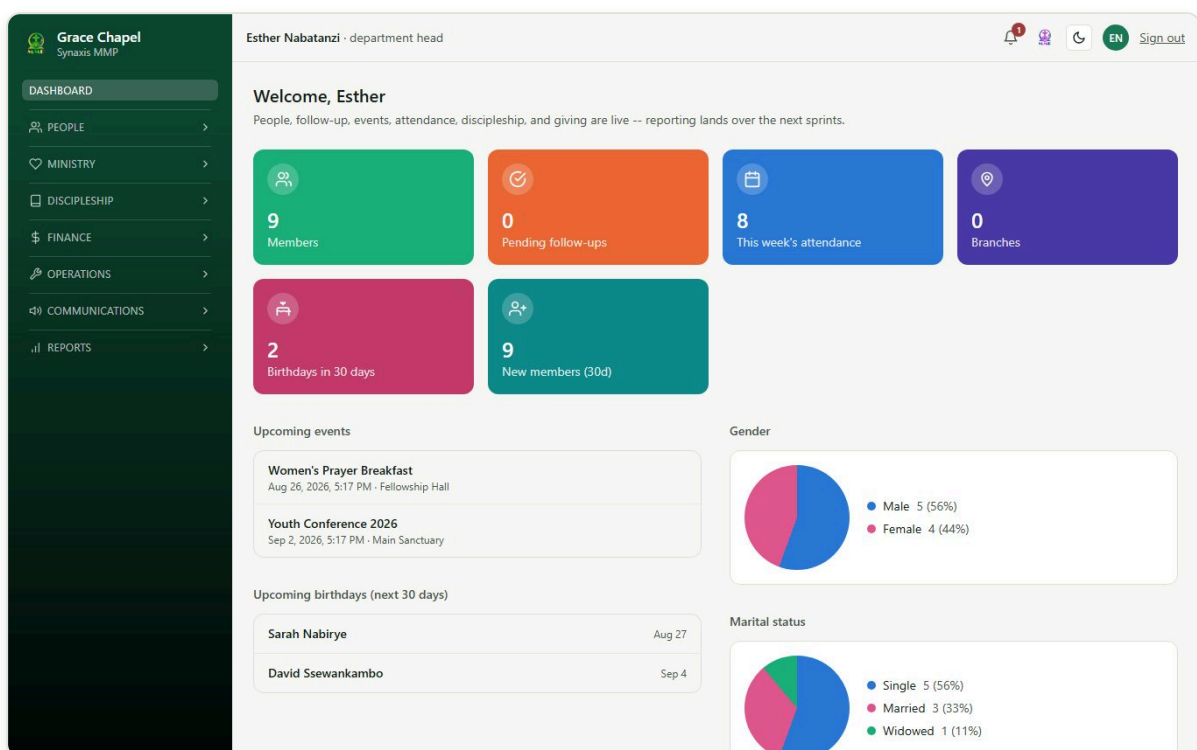

Emmanuel Cell Group - Aug 9, 2026
Submitted by David Ssewankambo - attendance 11 - giving UGX 30,000
Prayer and worship night. Awaiting review

Reviewed:

Ministry → Fellowship reports, from the leader's side: the submission form on top, then a pending report awaiting finance review below it.

Department Head: requesting funds

A Department Head asks Finance for money against a stated reason — new choir uniforms, replacement equipment, and so on — through Finance → Requisitions. The request is scoped to their department, sits pending until Finance approves or rejects it, and (once spent) is followed by a separate accountability report proving where the money went.

A Department Head's dashboard.

Volunteer & Member Guide

The narrowest role — a dashboard, and whatever's been assigned.

A Volunteer (or a Member with a login) gets the same clean dashboard as everyone else — congregation size, this week's attendance, upcoming events and birthdays — without any of the tiles or actions that belong to a finance or leadership role. There's no giving tile, no staff count, and no Setup area. Day to day, a Volunteer's actual work happens in whatever specific area they've been asked to help with — checking people in at an event, for instance — rather than in a dedicated screen of their own.

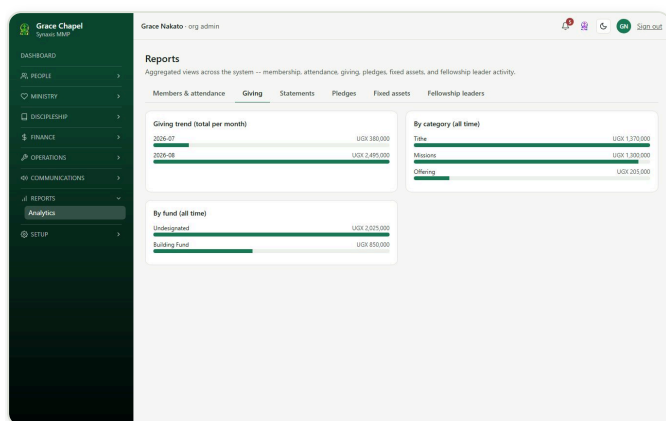

A Volunteer's dashboard — the narrowest view in the system, with only what applies to everyone.

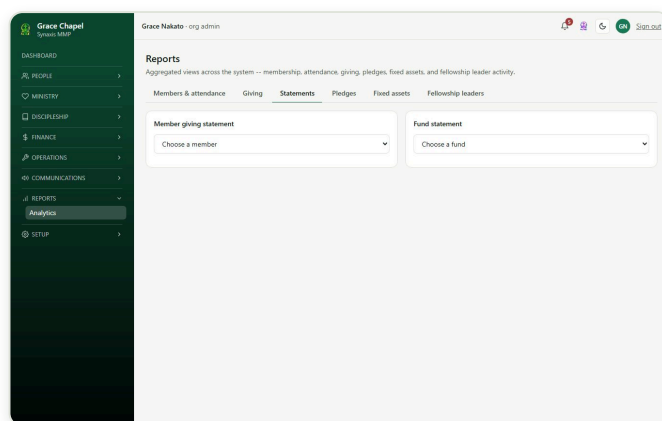

Reports & Analytics

One shared section, six tabs, available to Org Admins and Finance Officers.

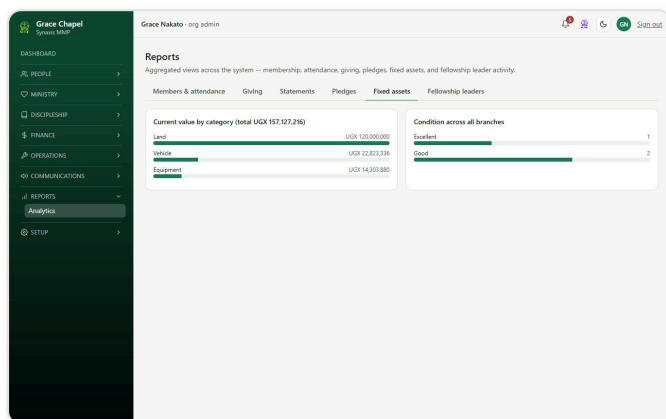

Reports pulls together aggregated views across the whole system: membership and attendance trends, giving by month/category/fund, running statements for a member or a fund, pledge fulfillment, fixed-asset value and condition, and fellowship-leader activity. No charting library is used anywhere in the system — every bar and pie is a plain, dependency-free element, consistent with the rest of the interface.

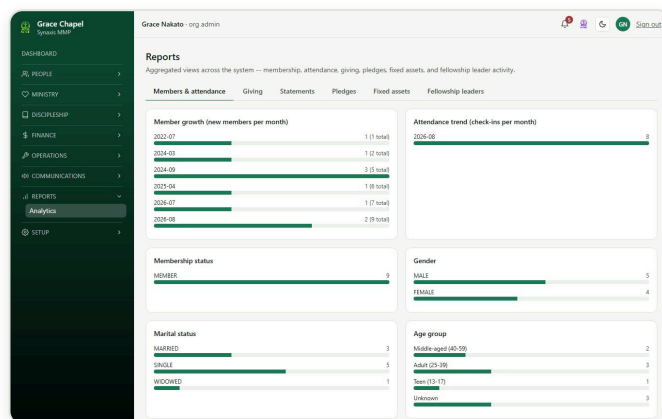

Reports → Giving — monthly trend, by category, by fund.

Reports → Statements — a running statement for a chosen member or fund.

Reports → Fixed assets — current value by category, condition across every branch.

Reports → Members & attendance — the first tab, shown earlier in Chapter 03.

The **Statements** tab is the closest thing to a printed giving statement today — pick a member or a fund and see every gift, in order, with a running balance. There's no dedicated export-to-PDF button on this view yet, so a printed copy currently means printing the page itself.

Roles & Permissions at a Glance

A quick-reference summary of what each role can see and do.

Role	Can access	Cannot access
Platform Administrator	Create and suspend church organizations; appoint each church's first Org Admin; generate password reset links.	Any church's members, households, giving, fixed assets, or pastoral data — by design, enforced at the database level.
Org Admin	Everything within their own church: members, households, fellowships, departments, events, attendance, discipleship, finance, fixed assets, communications, reports, staff, and settings.	Any other church's data.
Finance Officer	Giving, categories, funds, pledges, vendors, partners, batches, accounting, financial settings, requisition approval, financial reports.	Staff management, church settings, the Platform Admin area.
Department Head	Their own department's activity; submitting fund requisitions and accountability reports.	Approving requisitions (Finance-only); other departments' internals; staff/settings.
Fellowship Leader	Submitting fellowship meeting reports (attendance, giving, expenses) for their own fellowship.	Approving their own or others' fellowship reports; finance/staff/settings areas.
Volunteer	Dashboard and whatever specific task they've been assigned to help with (for example, event check-in).	Finance, staff, settings, and approval workflows.
Member	The same narrow, task-specific access as a Volunteer, where a login has been created for them.	Finance, staff, settings, and approval workflows.

A NOTE ON THIS DOCUMENT

This guide was produced against a local demonstration copy of Synaxis MMP, populated with invented data for a fictional church, "Grace Chapel," and fictional staff and member names throughout. No real congregation, giving, or personal data appears anywhere in this document.
